

# Lead Frontend Engineer

---

*A dynamic and resourceful professional with over 10 years of experience in web development, showcasing innovation and a proactive approach. Specialized in software development, strategic planning, and adept in agile best practices.*

## Personal

I excel in organizational skills and decisiveness, balancing the ability to collaborate effectively within a team while also being highly self-motivated to independently tackle challenges. I enjoy working with others and tackling challenges independently. I'm always eager to learn and find ways to grow, both personally and with the team.

Outside of work, my primary focus is on quality time with my two young sons. When I do find some free time, I enjoy playing video games with my wife. Whether it's competing head-to-head or with friends in Mario Kart, or tackling levels together in different games, it's always an enjoyable experience. Additionally, I also play Dungeons and Dragons with old school friends once a month.

## Education

I completed my degree in 2014 at Teesside University where I received a Second-Class Honours degree. Whilst at university, I studied a wide array of modules which have helped build my knowledge base of the computing world.

## Qualifications

Teesside University - BSC Computing – 2:1

## Employment History

Employer	Dates worked	Job title
<b>Leighton</b>	January 2017 – present	Lead frontend engineer / Senior software developer / Software developer
<b>FNVi</b>	January 2015 – December 2016	Front end web developer
<b>GigSource</b>	September 2014 – January 2015	Developer
<b>Clicksco</b>	June 2014 – September 2014	Intern

### Leighton

In my current position at Leighton, I am the lead frontend engineer on my team overseeing the team redeveloping different parts of the website using a new design language and new components. I have been involved with design discussions from useability for customers to feasibility for developers; I have worked with our business analysts on story creation and functional requirements from the designs as well as liaising with key business stakeholders on our progress and the business requirements and the project roadmap. Whilst at Leighton I have had many fantastic opportunities to work with, and learn, new frameworks such as Angular, React, Bootstrap and Foundation. I have enjoyed learning these new frameworks in this position as well as working with some big clients such as British Airways and Home Group as working with these clients has enabled me to expand my knowledge as well as my leadership and mentoring skills.

### FNVi

For two years I worked as a frontend web developer at FNVi, at my time there I learnt a lot about best practices and improved my web development skills tenfold. I learnt a lot about design and how to make web sites and applications better and easier for the end users. While I was there, I created 16 websites, and every client was pleased with what they received.

## **GigSource**

After the summer of 2014 I continued working on my own business under the Digital City Fellowship and started learning about frontend web development and how things would look from an end user perspective. By doing this I was able to make sure that the end user would have the best possible experience when using the website.

## **Clicksco**

Over the summer of 2014 I worked for Clicksco as an intern. We were split into teams and had to come up with an MVP by the end of the summer. I developed a product which was a website that incorporated a MySQL database, jQuery, HTML and CSS.
